

MANGAR Rhevac Pro

The Mangar Rhevac Pro is an evacuation stretcher to aid the safe emergency evacuation of a patient. It reduces the risk of manual handling injuries with ergonomically designed ladder handles.

SEAMLESS TRANSFER

Designed for use with the Mangar Rhino Lifting Cushion, the Rhevac Pro provides a seamless transfer from start to finish. During an evacuation, the Rhevac Pro secures around the patient and the Rhino, removing the need for an additional transfer off the Rhino.

ULTIMATE FLEXIBILITY

The Rhevac Pro is a flexible solution to evacuating immobile patients as it can navigate obstacles that other evacuation products can't.

IMPROVES WELLBEING

The Rhino can stay partially inflated inside the Rhevac Pro during the evacuation for added comfort. Using both the Mangar Rhino and Mangar Swift together, the patient can be transferred from a bed to the Rhevac Pro with minimal manual handling required.

FEATURES:

- Working Load Limit of 500kg
- Made in the UK
- Compatible with the Rhino Lifting Cushion
- Heavy-duty PVC material
- Ergonomic design
- Colour coded webbed straps
- Wipe clean surface
